

Trilogy launches Intercom Anywhere mobile application
*Intercom Anywhere extends intercom functionality to Android and
Windows Mobile devices*

Andover, UK – 10th August 2011 - Trilogy Communications, the global provider of digital intercom systems and Master Reference Generators to the broadcast industry is launching its Intercom Anywhere solution, a mobile application for its Gemini distributed matrix system. The new mobile application which installs on Android or Windows mobile devices including PCs, tablets or Smart phones will be on display for the first time at this year's IBC in Amsterdam on stand **10.A29**.

Designed to work with Trilogy's Gemini distributed matrix intercom systems, Intercom Anywhere enables remote users to access the full non-blocking audio capabilities of the intercom systems from anywhere at any time and be up and running in minutes without the need for dedicated hardware. Audio mixing and routing will continue to take place in the Gemini matrix, however individual users will access the intercom via a Virtual Panel on the mobile device and a VoIP connection over standard TCP/IP networks. Compatible user devices include desktops, laptops, netbooks and tablets running either the Android® or Windows® operating system.

Mobile users will have access to up to 32 simultaneous voice channels for direct and conference style communications. Calls to and from radios, other phones and other voice technologies connected to the Gemini system are also supported from a mobile device that can operate on a wired or wireless network.

Barry Spencer, General Manager at Trilogy Communications added, "Intercom Anywhere offers our customers the ultimate flexibility with fast deployment and lower logistics and maintenance costs, allowing users access to the system where and when they need it. He added, "It is a logical extension of our Gemini product range which builds on our IP expertise to deliver real time, high quality voice solutions across local or global networks."

Gemini's flexible design is suited to every application ranging from small single studios to the largest multi-studio complex, and using Gemini's seamless IP interfacing, a network can be

expanded almost limitlessly in terms of system size and geographic location via LAN, WAN or Satellite and its comprehensive bandwidth management capabilities enable it to accommodate variable network conditions.

Whilst launching Gemini, Trilogy has taken great care to ensure that Gemini will continue to integrate with its existing Commander, Orator and Mercury systems to offer users the utmost flexibility when upgrading existing systems. In addition Gemini operates with all of Trilogy's current panel range including its class leading touch screen operator panels.

About Trilogy Communications

Trilogy has supplied audio communications equipment to customers in more than seventy countries since 1986. The company was originally formed to design and build video and audio infrastructure equipment for the television and radio broadcast market. It continues to serve this market but now also offers its products to a wide array of customers in defence, emergency management, training and simulation, oil and gas, gaming, and other industries.

Trilogy counts some of the world's best known names among its customer base. These include BBC, ITV, CBS, Hearst-Argyle, Fox TV Poland, Radio France, Arqiva, Star TV, Times TV, Qatar TV, Reuters and many others.
